

IF YOU ANSWER **YES** TO THESE **3 QUESTIONS,** TALK TO YOUR DOCTOR ABOUT GETTING SCREENED

1

Are you a current or former smoker?

2

Are you 50-80 years old?

3

Have you smoked 1 pack a day for 20 years, or 2 packs a day for 10 years?

CT LUNG SCREENING COULD SAVE YOUR LIFE.

The US Preventative Services Task Force released new guidelines in 2021 to enable millions more smokers to get low-dose CT lung screenings that can detect lung cancer earlier, when surviving five or more years is 56% more likely. This screening is available at all Princeton Radiology locations.

Check with your insurance company to verify coverage. If insurance does not cover this screening, Princeton Radiology also has an out-of-pocket option for \$99 - a small price to pay for peace of mind.

Contact Princeton Radiology to
verify eligibility and
to schedule an appointment

As an ACR designated lung cancer screening center, our facilities demonstrate commitment to providing high quality screening and patient safety.
