

Over 60 years of **Excellence in Imaging**.
And that's just one reason why
Princeton Radiology is the right choice.

- **Expertise you can rely upon.**
Interpretations and interventional procedures performed by board certified, subspecialty trained radiologists who live and work in our community and are accessible to your doctor for consultation.
- **We respect your time.**
Fast scheduling, less time in the waiting room, and prompt results to your doctor.
- **Patient-friendly hours.**
We cater to your schedule with daytime, evening and weekend hours.
- **Conveniently accessible.**
Easy access to comprehensive imaging services with ample parking at our convenient Princeton, Monroe, Mercerville, Freehold, Marlboro, Wayne, Mountain Lakes and Newfoundland locations.
- **Comfortable experience.**
Our goal is to provide every patient with the most comfortable and positive experience possible. From our friendly and caring staff to our beautiful imaging facilities, everything we do is focused on you.

To schedule an appointment or arrange a consultation with an imaging specialist call **609.921.8211** or visit **PrincetonRadiology.com** to request an appointment.

176 Route 9 North

Wayne
330 Ratzer Road, Suites A-6 & C-15

Mountain Lakes
333 U.S. 46, Suite 105

Newfoundland
2713 Route 23 South

Expert imaging care for a
lifetime of diagnostic needs.

A Better Imaging Experience
We're dedicated to providing convenient, state-of-the-art imaging in a relaxing, patient-centered environment.

Services by Location	Princeton	Monroe	Mercerville	Freehold	Marlboro	Wayne Suite A-6	Wayne Suite C-15	Mountain Lakes	Newfoundland
MRI-1.5T									
MRI-Dedicated Extremity									
MRI-3.0T Wide-Bore									
CT – 16-Slice Low-Dose									
CT – 64-Slice Low-Dose									
CT – 128-Slice Low-Dose									
X-ray & Contrast Studies									
Ultrasound									
3D SmartMamm™ (Mammography)									
DXA Bone Densitometry									
Body Composition									
PET/CT									
Interventional Radiology									
Vein Treatments									

Comprehensive Diagnostic and Interventional Radiology Services

3D Digital SmartMamm™ (Mammogram)—X-ray exam of the breast with computer-aided detection and 3D mammography for maximum accuracy in the early detection of breast cancer. Princeton Radiology’s SmartMamm™ goes a step further by assessing your lifetime risk of breast cancer and including your personal risk score on your mammogram report, at no additional charge. Same day results available.

Biopsies—Minimally invasive ultrasound- or MRI-guided extraction of tissue or fluid to test for cancer or infection.

Body Composition Analysis—DXA scan that precisely measures the proportion of fat, lean muscle and bone in your body, then compares your results to a large database of age-matched, same-sex individuals, to give you an analysis of your body composition.

Bone Density (DXA)—Fast and painless low-dose X-ray to test for osteoporosis or earlier stages of bone loss.

CT—Imaging technique that uses computer-processed x-rays to create detailed pictures of cross-sections (or “slices”) of the body to determine the location, nature and extent of many different diseases or abnormalities. We have 16-, 64- and 128-slice low-dose scanners for specified imaging studies.

CT Lung Cancer Screening—Capable of detecting cancer at an earlier, more treatable stage in patients 50 to 80 years old who have a history of smoking or are at an increased risk. These guidelines were updated in March of 2021; please check with your insurance plan to determine coverage.

Interventional Radiology—Minimally invasive, image-guided procedures that provide alternatives to major surgery. We currently offer a variety of ultrasound-guided biopsies, as well as paracentesis, thoracentesis, dialysis intervention, and vein treatments at our Minimally Invasive Care Center in Monroe. Ultrasound-guided breast biopsies are available in Wayne, Suite C-15. Additional procedures, such as vertebroplasty, uterine fibroid embolization, and tumor ablation are available at our hospital locations: Penn Medicine Princeton Medical Center and CentraState Medical Center.

MRI—Non-invasive imaging technique that uses radio waves, a strong magnetic field, and a computer to create extremely detailed pictures of tissues and organs inside the body without the use of ionizing radiation or radioactive substances of any kind. We are fully-equipped with short-bore and wide-bore MRI units of varying magnetic strengths for comprehensive diagnostic applications. We also offer Quiet MRI and Extremity MRI for maximum patient comfort.

Pediatric Radiology—Safe, low-dose imaging studies of infants, children and adolescents performed under the careful guidance of our expert pediatric radiologists who have detailed knowledge of childhood illnesses, diseases and medical conditions.

PET/CT—An advanced imaging technique that combines positron emission tomography (PET) and computed tomography (CT) into one machine. A PET/CT scan reveals information about both the structure and function of cells and tissues in the body. Its primary role is cancer diagnosis, staging and treatment planning; however, PET/CT is also useful for imaging the brain.

Prostate MRI—An advanced, computer-assisted study that provides definitive diagnosis when physical exams, PSA tests, or biopsies for prostate cancer have been inconclusive. MRI-guided biopsy is also available.

Ultrasound—Uses sound waves to obtain images of various organs and tissues throughout the body to diagnose a variety of diseases and conditions.

Women’s Imaging—Comprehensive screening, diagnostic, and interventional radiology services, including 3D digital mammography through our SmartMamm™ program, breast ultrasound, Smart Breast MRIs™, image guided biopsies, bone density testing for osteoporosis, body composition analysis, pelvic/prenatal ultrasound, and uterine fibroid embolization.

Vein Treatments—Fast, convenient outpatient procedure performed at our Minimally Invasive Care Center in Monroe, by our fellowship-trained veins specialists, which provides relief for men or women suffering from the pain and embarrassment of varicose or spider veins. Covered by most insurance plans and Medicare for patients experiencing medical effects or lifestyle disruptive impacts.

X-Ray/Contrast Studies—Full range of applications ranging from examining bones for fractures to studies using contrast material for diagnosing disease or injury in joints or internal organs.
